
PROJECT CONCORD*Veridian Data Platform Team Project**Project Defense Friday 14 August 2026 9AM Prompt*

Team Composition

Generated from the Student Registration Form responses. This document assigns every eligible respondent to one of six project teams and lists each member's WhatsApp-preferred phone number for team coordination. Email addresses were collected on the form but are intentionally held in reserve and are not published in this roster.

How teams were formed

- 35 students were assigned to teams. The form recorded 39 submissions. Matching on email address together with phone number, so that two different people who happen to share only one of the two are not wrongly merged, found 3 resubmissions from the same person kept under a slightly different name each time: Victor Umanah, Ruth Thompson, and one respondent who submitted first as Promise Sunday and later as Promise Peter. In each case the later, more recent submission was kept. Peter Akpan was then excluded from the team composition as instructed.
- One pair of respondents, Johnson Chukwuka and Mkpouko-Abasi John, submitted from the same email address but with different names and different phone numbers about seven minutes apart. They were treated as two distinct people, most likely sharing one email account, and both are kept in the roster.
- Everyone from the Meta Insight cohort was kept together as a single team, Team Core Hub, per instruction. This group has 7 members, which sits one above the 5 to 6 target team size; it is flagged here rather than split, since keeping the Meta Insight group intact was the more specific instruction.
- The remaining 28 students, all from the Veracity Vanguard cohort, were divided into five teams of 6, 6, 6, 5, and 5, the most even split possible under a 5 to 6 person cap.
- Within Veracity Vanguard, members were distributed to balance each team's mix of self-rated SQL proficiency (Beginner, Intermediate, Advanced) and preferred project role, rather than assigned in raw submission order, so that no single team is left without any Intermediate or Advanced respondents.
- Free-text answers for preferred and avoided teammates were inconsistent (first names only, nicknames, or entries such as "Anyone" or "I don't know them by name") and were not reliable enough to match automatically. They were not used in this assignment; review them manually if particular pairings matter before finalising teams.
- Teams are named after Project Concord's five divisions plus a Core Hub team, purely for identification. Rename them freely to whatever convention you prefer.

Team size summary

Team	Source group	Members
Team Core Hub	Meta Insight (entire group, kept together as one team per instruction)	7
Team AgriCore	Veracity Vanguard (split evenly, balanced by SQL proficiency and preferred role)	6
Team Meridian Retail	Veracity Vanguard (split evenly, balanced by SQL proficiency and preferred role)	6
Team Concord Logistics	Veracity Vanguard (split evenly, balanced by SQL proficiency and preferred role)	6
Team Veridian Financial Services	Veracity Vanguard (split evenly, balanced by SQL proficiency and preferred role)	5
Team Veridian Properties	Veracity Vanguard (split evenly, balanced by SQL proficiency and preferred role)	5

Total students assigned: 35
